Orthopaedic Surgery & Rehabilitation - Jacksonville

ORTH E 1J | 4th Year Elective | Orthopaedic Surgery and Sports Medicine | Clinical Science | Jacksonville

MDT 7570 | Ortho Surg & Rehab Jax

Course Description

Musculoskeletal injuries and disorders are increasing as the population is aging. Therefore, there is a tremendous opportunity for physicians treating patients with these problems to do great good for large numbers of people. In Orthopaedic Surgery, our goal is to help the patients return to an active way of life. Orthopaedic Surgery is an exciting specialty with many available career opportunities and choices. The multiple opportunities for subspecialties training (including sports, hand and upper extremity, total joints, spine, pediatrics, trauma, and musculoskeletal oncology), which offer differing physician lifestyles along with the variety in areas of interest. Our rotation is centered at the University of Florida Jacksonville for a 4-week rotation. One week will be spent on the Orthopaedic Trauma, hand, sports and pediatrics.

This overview is designed to help you get the most out of your brief time with us. It is important that you have appropriate expectations of your rotation, and you understand what is expected of you. Orthopaedics is a surgical subspecialty. This rotation involves a preceptor type of rotation for hand and team type rotations for trauma and pediatrics. You will be completing surgery and clinic with the involved attending staff. In the operating room, you will be expected to be prepared for the surgical cases by reviewing the patient's history and understanding the indications for surgery by discussion with the resident(s) and/or attending. In addition, basic knowledge of the surgical anatomy is expected. During your time on the Orthopaedic rotation, we expect you to work to improve and perfect your physical examination skill set while in the clinical setting. Seeing patients in our clinic, you will evaluate the patients who are deemed appropriate for surgery, as well as see them in their postoperative and recovery phases. You will learn the basics of a good physical examination, which is necessary no matter which discipline you decide upon.

Course Faculty and Staff

- [Porter Young MD](#) (Director)
- [Dani Brown](#) (Course Staff)
- [Lisa Hernandez](#) (Course Staff)
- [Jennifer R. Hamilton BA](#) (Course Staff)
- [Frank J Genuardi MD, MPH](#) (Other Faculty)
